School Incursions

Available for primary and secondary classes

Learn about the life under your feet with an interactive session looking at micro-organisms using light compound microscopes!

Have you seen what's under your feet? We'll explore the soil food web and the fascinating micro-organisms not seen with the naked eye. We provide up to 3 light compound microscopes and a stereo microscope to view soil samples that we will bring! We can customise sessions to certain grades and topics.

What resources do we need?

Access to powerpoints, tables and chairs for the children to work at and lots of curious children!

How will the incursion work?

After a 15 minute presentation on the soil food web and organisms found in the soil (customised to grade level), students will move into 40 minutes of various activities.

Please note: In order for each child to view down the microscope we prefer small groups and so divide the class in half. This means that the other half of the class will need to be supervised by the class teacher. Activities can be provided or the teacher may choose their own.
